

Tellus Partners with Joe's Auto Parks to Launch State-of-The-Art EV Charging Stations in Los Angeles

Las Vegas, NV January 5, 2016

Tellus Power has announced that it is teaming up with Joe's Auto Parks, one of the largest parking operations and management companies in Los Angeles, to launch Tellus' state-of-the-art electric vehicle charging stations in the nation's top EV market. The new sleek and durable networked EV charging stations are to be installed at Joe's parking structures in 90 locations throughout downtown L.A., helping to accelerate the deployment of the electric vehicle charging infrastructure for visitors, local retailers, businesses and residents.

Joe's parking patrons will be able to utilize Tellus' fast and easy-to-use charging stations 24/7. Unlike similar models, Tellus' EV charging stations can charge two vehicles at the same time with no power sharing between vehicles.

The Dual Port Level 2 chargers deliver a full 7.2 kW charge to both vehicles simultaneously, reducing charging time by 50 percent. In addition to being efficient, the charging stations are extremely user-friendly. The Tellus network features a quick first-time driver activation - drivers only have to type in their cell number, receive a text message, and are able to begin charging.

Tellus Power offers the world's toughest, high-performance, low-cost networked EV charging stations. Made with rugged ¼-inch thick marine-grade and corrosion-resistant aluminum. Tellus offers a full line of pedestal mount, wall mount, pole mount and solar carport mount models. Tellus EV chargers are made in the USA.

About Joe's Garage:

Joe's Auto Parks is a privately-owned parking operations and management company owned by L&R Group, featuring over 90 locations in downtown Los Angeles and Orlando, Florida. Joe's Auto Parks are expanding into San Diego, Inglewood, and Pasadena, California.
